

Hi-Force has recently changed the design of the CH1000 hydraulic cable crimping head, which is now referred to as the CH1000N.

The design has been changed to make the tool increasingly compact and therefore more user friendly. Various dimensions of the tool have been reduced, most notably the overall length of the tool which was changed from 17.93 inches to 15.55 inches.

The CH1000N remains suitable for crimping distribution and transmission lines up to 1000m<sup>2</sup> however the output tonnes capacity has been increased from 55 tons to 66 tons.

The CH1000N is available for Hi-Force offices and distributors to begin promoting with immediate effect.
